

(a) Curves of one activity;  
the most typical one is the reference  $r$

(b)  $r$  is segmented once ( $M = 4$ ):  
defines the segments of the activity

(c) Segments found in each curve by DTW;  
its  $(\phi, \lambda) =$  one training example

(d) New execution: profile rebuilt  
from the predicted  $(\phi, \lambda)$
